

Safe guarding Study Morning 6th March

Does your role involve working with adults who have a need for care and support and who may be unable to protect themselves from abuse or harm?

Do you want to know more about how to reduce the risk of harm to adults and manage safeguarding concerns?

This study morning is suitable for nurses and health care support workers from primary and secondary care and the independent care sector, allied health professionals and students. The morning will provide an overview of adult safeguarding and will develop attendee's knowledge and skills in identifying and managing safeguarding issues.

It introduces safeguarding legislation, risk and harm reduction, explores different types of abuse, explains the Adult at Risk process and provides an opportunity to develop decision making skills with regard to safeguarding adults.

The study day includes informative teaching and workshop sessions based around a variety of case studies enabling attendees to develop their skills in adult safeguarding practices and safeguarding decision making.

Kay Plumpton, the lead for this event, has a background in Adult Safeguarding with experience as a Safeguarding Specialist Nurse for adults.

Location: Bangor University, Fron Heulog
